**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

### Office Action Summary

**Application No.**

10/701,236

**Applicant(s)**

CROOKE, STANLEY T.

**Examiner**

KIMBERLY CHONG

**Art Unit**

1635

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 19 August 2009.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1,71-73 and 76-79 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1,71-73 and 76-79 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO/S5108)  
Paper No(s)/Mail Date 08/26/09
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date \_\_\_\_\_
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: \_\_\_\_\_

## **DETAILED ACTION**

### ***Status of Application/Amendment/Claims***

Applicant's response has been considered. Rejections and/or objections not reiterated from the previous office action are hereby withdrawn. The following rejections and/or objections are either newly applied or are reiterated and are the only rejections and/or objections presently applied to the instant application. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

With entry of the amendment filed on 08/19/2009, claims 1, 71-73 and 76-79 are pending in the application.

### ***Claim Rejections - 35 USC § 103 - maintained***

The rejection of claims 1, 71-73 and 76-79 under 35 U.S.C. 103(a) as being unpatentable over Lee et al. (Cell 1993 of record), Manche et al. (Molecular and Cellular Biology 1992 of record), Agrawal et al. (WO 94/01550, cited on IDS of 4/4/05) Baracchini et al. (US 5,801,154 of record) and Acevedo et al. (US 5,519,134 of record) is maintained for the reasons of record.

Applicant's arguments are not found persuasive. Applicants traverse the obviousness rejection by providing a declaration from Dr. David Corey.

With regard to the Lee et al. reference, Dr. Corey argues that in order to arrive at a compound described in the claims starting with lin-4S one would have to change the base sequence to make it fully complementary to a target and pair it with a second, complementary strand to form a duplex; he states that Lee provides no reason for doing

this. Dr. Corey further notes lin-4L is not a duplex of two separate strands and because this duplex is speculated to be inactive there would be no reason to change a stem-loop to a duplex. Dr. Corey further states that the enzyme that separates the self-complementary portion of a stem-loop molecule may not be able to separate the strands of a duplex consisting of two unattached strands in order for a self-complementary molecule to function as an antisense compound. Dr. Corey further argues RNA is relatively unstable and susceptible to degradation by nucleases and argues that because a hairpin structure constrains the complementary portions to remain near one another, it likely enhances nuclease resistance and one would be disinclined to replace a relatively stable and nuclease resistant structure with one would be expected to be less stable and less resistant. Dr. Corey further states the duplex described in Lee et al. is an endogenous transcript and nothing suggests that an exogenous sequence could be used to achieve the same effect and there is no suggestion in the reference to introduce modifications into a synthetic molecule. Dr. Corey concludes that compounds having the structure in the claims would have been considered ill-suited for furthering or exploiting the research described in Lee.

These arguments with regard to the Lee et al. reference are not persuasive because they rely on the premise that the rejection of record is directed to changing the compounds disclosed by Lee into other compounds for use as an antisense compound. The rejection is not based on the teachings of Lee alone, but on a combination of references, and does not rely on a conversion of Lee from a partially complementary stem-loop to a fully complementary duplex. The teachings of Lee et al. are cited to

demonstrate that at the time of filing RNAs that form duplex structures were known to those in the art and used for a variety of purposes.

With regard to the Manche et al. reference, Dr. Corey argues Manche does not provide a reason to make duplexes comprising oligonucleotides 17 to 25 nucleosides in length, as recited in the present claims, because duplexes of that length failed to activate DAI and this reference further offers no reason to make chemically modified oligonucleotides because the duplexes used were synthesized enzymatically.

These arguments are not persuasive because Manche actually makes duplexes of oligonucleotides of 15-25 nucleotides in length; whether such compounds were able to activate DAI is not at issue in this application; the claims are not directed to compounds having any particular activity. While it is correct the compounds of Manche were enzymatically synthesized, the reason to make chemically modified oligonucleotides comes from the knowledge in the art that stabilization of oligonucleotides is desirable. This knowledge is demonstrated by the teachings of Baracchini et al. and attested to by Dr. Corey in his remarks regarding the relative instability and nuclease susceptibility of RNA.

With regard to Baracchini et al., Dr. Corey argues that Baracchini does not provide a reason to make double-stranded compounds, which would be expected to be inactive as RNase-H based antisense compounds because the sense strand would interfere with the ability of the antisense oligonucleotide to hybridize with its intended target RNA, and that this reference does not provide a reason to make compounds comprising ribonucleotides. Dr. Corey notes that the present specification describes an

antisense mechanism that does not depend on RNase H and it would have been impossible to make confident predictions regarding whether chemical modifications would assist or interfere with the function of RNase III.

It is correct that Baracchini does not teach double stranded compounds and does not exemplify compounds comprised of RNA, but this reference is not relied upon for such teachings, which are found in the Lee, Manche and Agrawal references. Also, the claims are directed to compounds, not to a mechanism of action, therefore whether one could predict an effect on the function of RNase III is not relevant to the rejection.

With regard to the Agrawal et al. reference, Dr. Corey argues this reference teaches single stranded self-complementary compounds that are covalently linked and Agrawal provides no reason to make a duplex comprising two separate oligonucleotides. Dr. Corey further argues that compound C in Figure 5, which most closely resembles the presently claimed duplexes, has a duplex region containing only 12 base-pairs, which is well below the minimum number of 15 in the present claims. Dr. Corey further argues Agrawal describes RNase-H dependent antisense compounds and the presently claimed compounds would not be considered suitable for use as RNase-H dependent antisense compounds

These arguments are not persuasive because, as noted in the rejection, Agrawal does teach compounds that comprise two separate strands. The rejection is not based on compound C of figure 5; the teachings of the prior art are not limited to exemplified embodiments. Agrawal teaches at page 10 that the target hybridizing region is about 8 to about 50 nucleotides in length. Also, the instant compounds are not recited to have

any particular use, therefore whether they would be suitable as RNase H dependent compounds is not relevant to the rejection.

Dr. Corey asserts the office action fails to offer a reason why one would make the claimed compounds, citing page 3 of the action. This assertion is incorrect; the reasons why the instant claims are obvious are described at page 5. Dr. Corey repeats the argument that Lee et al. and Agrawal et al. do not teach duplex RNAs and that these references therefore do not teach inhibition via duplex RNAs.

The examiner notes that stem-loop structures do form a duplex in the self-complementary region and Agrawal does teach separate complementary strands as described above, therefore the examiner stands by this statement.

Thus, the invention of claims 1 and 71-79 would have been obvious, as a whole, at the time the invention was made and the rejection is maintained.

### ***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kimberly Chong whose telephone number is 571-272-3111. The examiner can normally be reached Monday thru Thursday between 6 and 3 pm.

If attempts to reach the examiner by telephone are unsuccessful please contact Tracy Vivemore at 571-272-2914. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Patent applicants with problems or questions regarding electronic images that can be viewed in the Patent Application Information Retrieval system (PAIR) can now contact the USPTO's Patent Electronic Business Center (Patent EBC) for assistance. Representatives are available to answer your questions daily from 6 am to midnight (EST). The toll free number is (866) 217-9197. When calling please have your application serial or patent number, the type of document you are having an image problem with, the number of pages and the specific nature of the problem. The Patent Electronic Business Center will notify applicants of the resolution of the problem within 5-7 business days. Applicants can also check PAIR to confirm that the problem has been corrected. The USPTO's Patent Electronic Business Center is a complete service center supporting all patent business on the Internet. The USPTO's PAIR system provides Internet-based access to patent application status and history information. It also enables applicants to view the scanned images of their own application file folder(s) as well as general patent information available to the public. For more information about the PAIR system, see <http://pair-direct.uspto.gov>.

For all other customer support, please call the USPTO Call Center (UCC) at 800-786-9199.
